

TCOM Program Review Form

Date: 07-25-18

Level of Care & Location: FFT, BedSo

Meeting Participants: XXXX

Part time: XXXX

Long Term Goals and Updates

Initiatives Name	Update
Danger to Self initiative,	<p>We're going to monitor danger to self scores. Both the incoming scores, to see how many of the clients coming in have this concern, and how that compares to the program norm (lately it's been higher.) Also, the outgoing score, and if we can improve it.</p> <p>Focus on healthier consequences to behaviors, so that the family can use them, instead of being scared to implement consequences because they trigger self harm.</p>
Supervision Improvements	Supervision is not in the Needs Profile. We will continue to monitor
Time from start of treatment to Discharge CANS	Not tracked currently because the Workstation is not currently counting LoS
Family Functioning	Family item continues to dominate, the improvement on it is WORSE this quarter than norm. discussion of this below.

TCOM Items of interest

Item(s)	Start Avg	End Avg	Comments (Date span is cases started since Jan 1, 2018)
Family Functioning	96	89	FBMH families have been coming here, and we are doing "bandaging" until people get here. FBMH has a plan to grow, but until then we are doing
Depression/Anxiety	64	70	<p>Not really meant to be so prevalent in FFT.</p> <p>Kids are suicidal. We give the parents tools to use with the kids, and there are concerns that the family is not following through.</p> <p>FFT model, which focuses on whole family meetings, is not the most appropriate for children who are wrestling with suicide. We try to refer to OP therapy, and the family/client refuses.</p> <p>The MCO needs to approve use of OP with FFT.</p> <p>Also, Fetterman notes that there has been a new referral stream of kids for truancy, who were depressed and this could impact this.</p>
	36	14	The team is very oriented towards referring to TF-CBT.

Adjustment to Trauma			
School attendance	8	3.7	Maybe should be higher? If there are in fact these truancy referrals?
Family Strength	44	66	Families have been very reticent and hopeless recently. Worse than Christie remembers. Parents have been really feeling "let's get rid of this kid."
Involvement	12	14	Could probably be tightened up in the scoring. It seems low if what we heard in Family strengths is true.
Resources	28	18	Team helps with resource acquisition/CM, etc.
Danger to Self	20	7.4	

Scoring Concerns:

(Here you list any concerns about how an item is being scored).

Involvement may not have been properly accounting for lack of interest on the caregiver's part. This will be pursued in the coming quarter.

Data Capture/Technical Concerns:

(Here discuss any things that might really be wrong with the technology capturing the TCOM data, like the EMR, or the form programmed into the EMR, etc.)

Who are the kids with Bedford HCS Geographic Area and Bedford Outpatient, Geographic area. Supervisor is pursuing.

Visualization/Data Analytic Concerns:

(Here you should put filters you want, analyses you think you want done, questions to pursue about the data structure, etc..)

Workstation needs the LoS information added. Should be up by next quarter's review.

Program/Organization Updates to Note:

FBMH wait list is leading to referrals of people who are more depressed, and families that are less engaged. This may be dragging down outcomes.

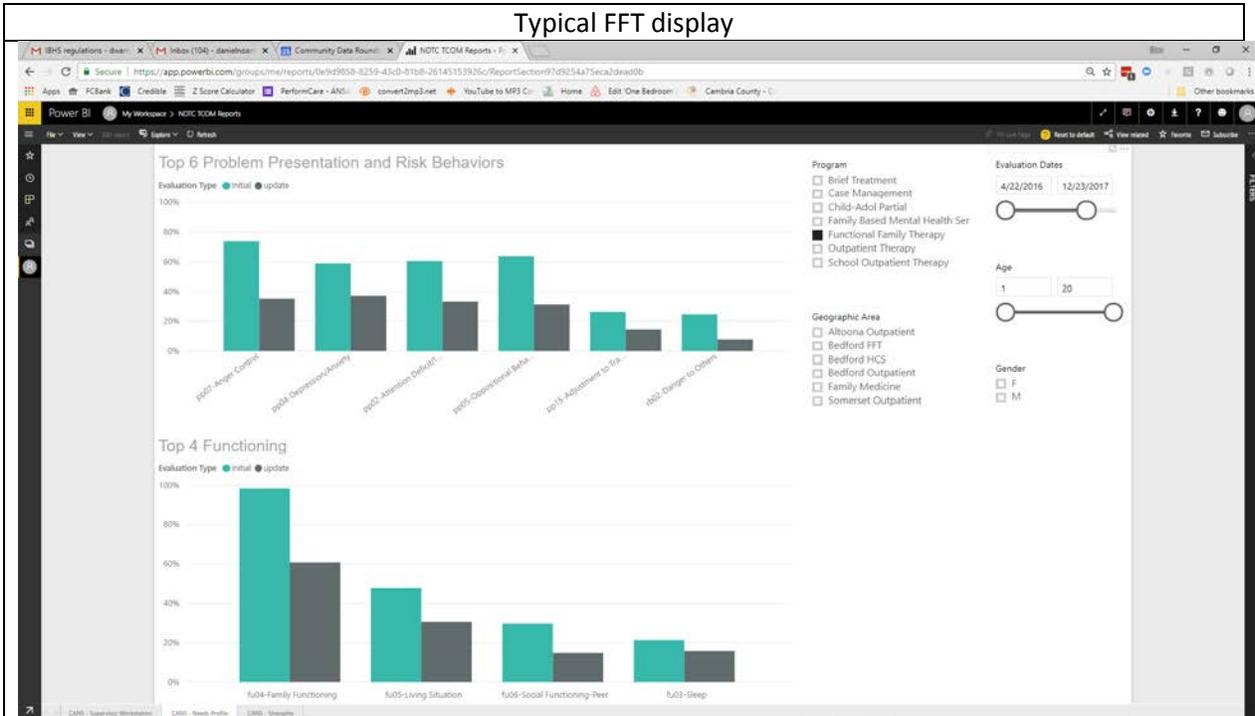

Truancy referrals are more depressed than we typically see. FFT feels up to treating these kids, they are just a new challenge.

Action Steps from Meeting

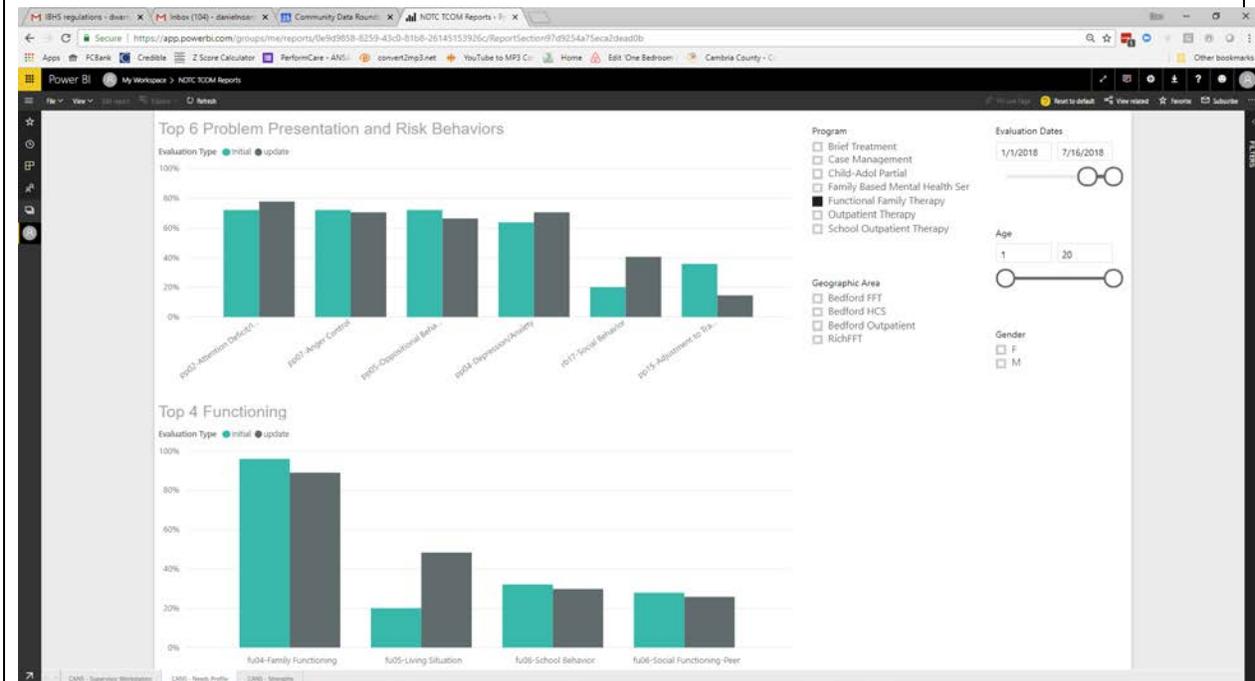

- Who are the kids with Bedford HCS Geographic Area and Bedford Outpatient, Geographic area. Christy is pursuing.
- FBMH referrals continue to come to FFT, this will adjust as FBMH gets its new team
- Workstation LoS counter needs to be added.

Paste here any important visualizations, INCLUDING IMAGES OF THE FILTER STATES, that you want to remember in order for future planning.

Typical FFT display

Since 2018

Note that top four needs are the same, but typically much more moderate, and we see much more improvement on Family functioning.
